

Precision catheter cutting machine

with conventional knives

Our pneumatic working catheter cutting machines for the multi-luminal catheter tubes are established for high precision cuttings, the easy usability and the reliability in the industrial use.

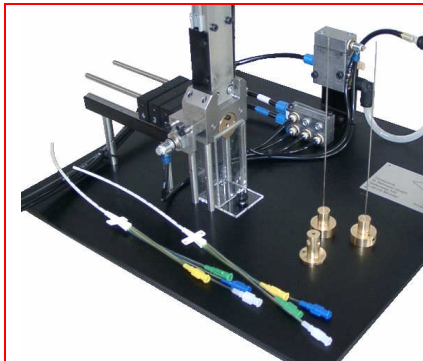

The cutting machines are conceived and built in according to the requirements of our customers. According to the requirements the components can be integrated at a base plate or in a production line with printing and cutting function, as example.

- processing of 2 -5 luminal catheter tubes
- all tube diameter
- chamfering beneath defined angle
- cutting angle adjustable
- Release: pneumatic
with Sensor/Laser
visual
- frontal cut beneath defined angle

New

Semiautomatic processing of catheter tubes with rotating knives for bur free and extremely precise chamfering.

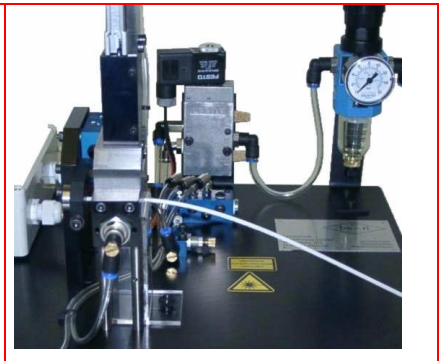

(Quod vide our brochure: Catheter cutting machine with rotating knives)

Catheter cutting machine for four miscellaneous lumen tubes in different diameters.

Bur free precision cutting

Cutting the edge of catheter tubes beneath two different angles.
